Week 5

Subject Subject	Website Design and Programming
	Bagas Satya Dian Nugraha ST. MT.
⊙ Type	Assignment
Semester	Semester 3
■ Time	@September 26, 2023

jobsheet 5

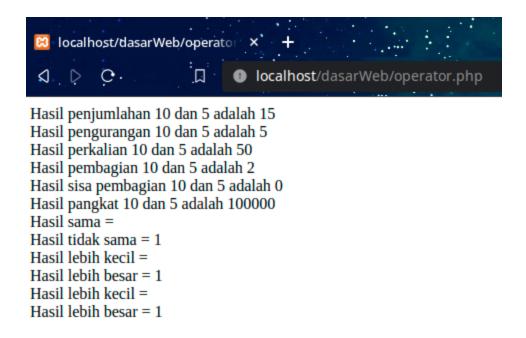

practicum 1

- 2. based on what we already create, there are several usage for \$\ \\$, where we can determine number, text, do some mathematics, check what kind of variables that we using (\var_dump), and array
- 3. number 3(s)
 - 3.1 result

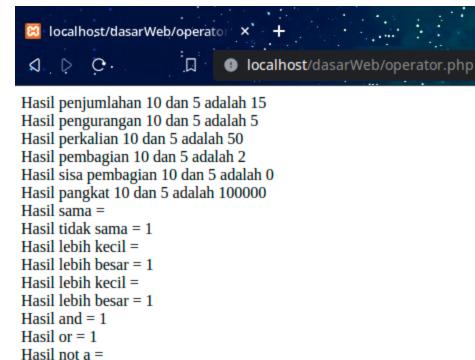

it shows what the operator does

3.2 result

it shows whether the answer is true or not, while in this case if the equation is true, it written as 1 where if it isn't, it writes nothing

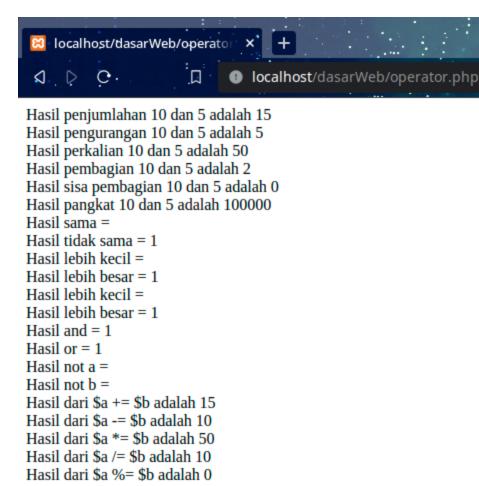

3.3 result

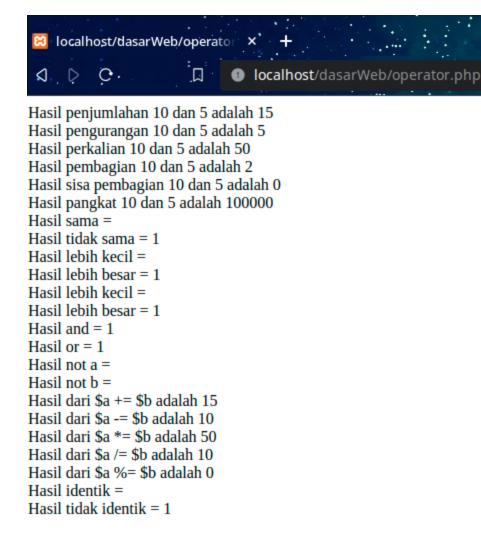

based on what printed in the web, we can see weird output on by the code due to we don't have anything to use the operator with

3.4 result

Hasil not b =

the operator is basically (for example +=) is \$a = \$a + \$b and so on 3.5 result

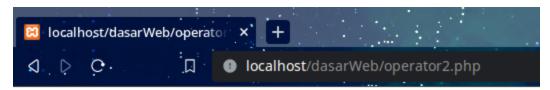

same as before, if the equation is right, it writes as 1 while if it isn't it writes as nothing

3.6 code and result

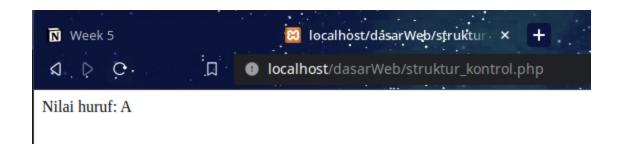

```
<?php
$kursi = 45;
$pelanggan = 28;

echo 'Sisa kursi yang tersedia adalah ' .
(($kursi - $pelanggan)/$kursi * 100) .
'% dari keseluruhan kursi';
?>
```

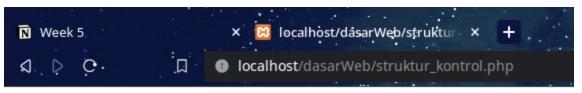

Sisa kursi yang tersedia adalah 37.7777777778% dari keseluruhan kursi

- 4. number 4(s)
 - 4.1 result

it shows the result as A since the number is 92

4.2 result

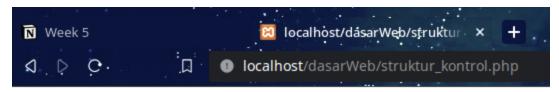

Nilai huruf: A

Atlet tersebut memerlukan 17 hari untuk mencapai jarak 500 kilometer

as the loops counts, it shows as 17 days

4.3 result

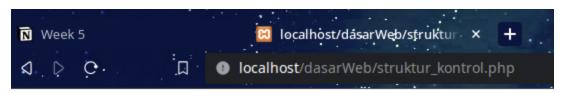

Nilai huruf: A

Atlet tersebut memerlukan 17 hari untuk mencapai jarak 500 kilometer Jumlah buah yang akan dipanen adalah 500

same as before, just using different loop, this one using for

4.4 result

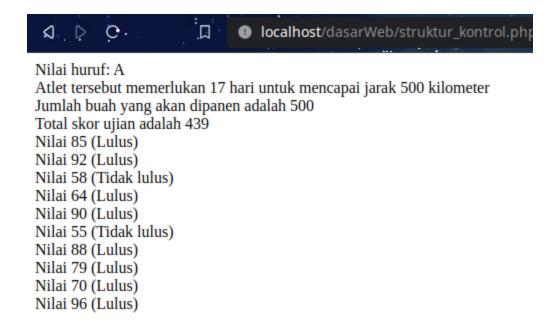

Nilai huruf: A

Atlet tersebut memerlukan 17 hari untuk mencapai jarak 500 kilometer Jumlah buah yang akan dipanen adalah 500 Total skor ujian adalah 439

same as well, but using foreach

4.5 result

it loops all the value and checks if the value is less than 60 or not, if it less it shows as (Tidak lulus)

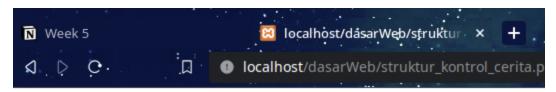

4.6 code & result

```
<?php
$nilai = [85, 92, 78, 64, 90, 75, 88, 79, 70, 96];</pre>
```

```
sort($nilai);
array_shift($nilai);
array_shift($nilai);
array_pop($nilai);
array_pop($nilai);

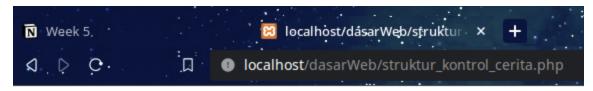

$total = array_sum($nilai);
$jumlah = count($nilai);
$rataRata = $total / $jumlah;

echo "Nilai rata-rata: $rataRata";
?>
```

Nilai rata-rata: 82.5

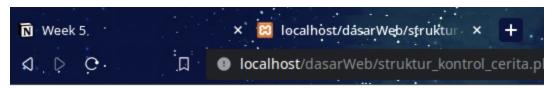

4.7 code & result

Harga setelah diskon 20% adalah 96000

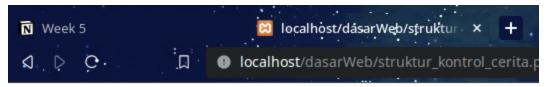

4.8 code & result

```
<?php
$poin = 405;
echo "Total skor pemain adalah: $poin <br>';
$hadiah = ($poin > 500) ? "Ya" : "Tidak";
echo "Apakah pemain mendapatkan hadiah tambahan? $hadiah";
?>
```

Total skor pemain adalah: 505

Apakah pemain mendapatkan hadiah tambahan? Ya

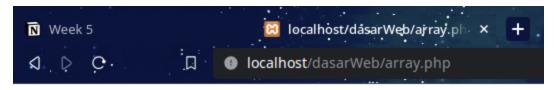

Total skor pemain adalah: 405

Apakah pemain mendapatkan hadiah tambahan? Tidak

5. number 5(s)

5.1 result

Daftar nilai siswa yang lulus 85, 92, 78, 90, 88, 79, 70, 96

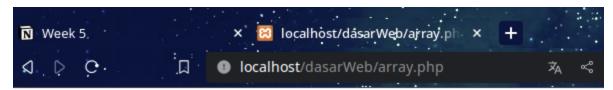

it shows all the value that passed

5.2 result

it shows all the worker that has more than 5 years of experience

5.3 result

Daftar nilai siswa yang lulus 85, 92, 78, 90, 88, 79, 70, 96

Daftar karyawan dengan pengalaman kerja lebih dari 5 tahun: Alice, Charlie, David, Eva

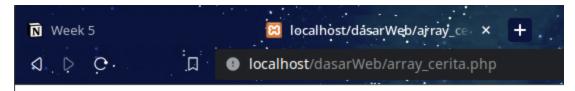

Daftar nilai mahasiswa dalam matakuliah Fisika:

Nama: Alice, Nilai: 90 Nama: Bob, Nilai: 88 Nama: Charlie, Nilai: 75

5.4 code & result

Week 5 10

```
foreach ($siswa as $nilai){
    if ($nilai[1] > $rataRata) {
        echo "Nama: {$nilai[0]}, Nilai: {$nilai[1]} <br>;
    }
}
```

Nilai rata-rata: 81.8 Nama: Alice, Nilai: 85 Nama: Bob, Nilai: 92 Nama: Eva, Nilai: 90

Week 5 11
